

Sentry Plastic Shield

It is durable, UV stable, peel and flake resistant and extends the life of plastic surfaces. It reduces the rate of oxidation, cracking and discoloring. It will restore the color from UV damage and then provide long-lasting protection from future UV damage.

Sentry Plastic Shield does not simply sit on the surface. Instead it forms a covalent molecular bond with the substrate creating a superior barrier against moisture, oil, mild acids, stains, abrasion and graffiti.

Sentry Plastic Shield is cost-effective. It requires less maintenance, is easy to clean and lasts longer than traditional coatings so offers significant cost and labor advantages.

Use Sentry Plastic Shield on plastic surfaces, plastic furniture, stadium seats, vehicle interiors, and vinyl awnings.

Tough, durable, environmentally sound and free of carcinogens

With less than 100g/L VOC it outperforms the most stringent air-quality controls in the US. Sentry also measures as being carcinogen free as defined by California Prop 65.
